SUMMARY

Pre-final year Cybersecurity undergraduate with hands-on VAPT experience, including discovery of critical vulnerabilities such as IDOR, CSRF token bypass, and authentication rate-limiting flaws (CVSS 8.8). Completed an internship at the Cyber Crime Wing, Tamil Nadu Police, building real-world exposure to case handling and security operations. Aspiring red teamer and penetration tester, actively strengthening offensive security skills through CTFs and independent lab environments.

SKILLS

Programming	Python, C, SQL, Kotlin
Security Tools	Burp Suite, subfinder, amass, dnsrecon, httpx, nmap, ffuf, nuclei, sqlmap
Platforms	Linux, Windows, MacOS
Cybersecurity Concepts	VAPT, OWASP Top 10, OWASP WSTG, Network Enumeration, Session/Cookie Security, RBAC
Languages	Tamil, English
Development	React.js, Android Studio, Git/GitHub, Docker

PRACTICAL EXPERIENCE

Intern at Cyber Crime Wing, Tamil Nadu Police, Chennai

01/06/2026 – 31/07/2026

- Developed a real-time crime case handling dashboard used to manage the full case flow creating, altering, and updating case details
- Built with React.js for the frontend and Python for automation, enabling timely status updates
- Implemented Role-Based Access Control (RBAC) to manage permissions across user roles
- Added security features including Multi-Factor Authentication (MFA) and rate-limiting
- Gained hands-on experience with how real cybercrime cases are handled and processed during the internship

Vulnerability Assessment & Penetration Testing Intern, Ascizen Academy, Chennai

01/03/2026 – 31/05/2026

- Applied OWASP Top 10 methodology across real-world web targets
- Practiced network enumeration, Linux-based tooling, and CTF-driven exploit techniques
- Documented findings using professional VAPT reporting standards

PROJECTS

Case Management Dashboard

React.js | Python | Google Appscript

- Role-Based Access Control (RBAC) for secure case tracking
- Multi-Factor Authentication (MFA) implementation
- Automated status updates and rate-limiting

Pngtree VAPT Assessment

- Discovered Critical Broken Object-Level Authorization (IDOR)
- Identified high-severity CSRF token bypass enabling cross-session request forgery
- Uncovered insufficient authentication protections missing rate-limiting on login endpoints

Moosik Streaming App

Kotlin | Jetpack Compose | Material 3 | Media3 Room | Hilt | Retrofit

- Visually stunning minimal UI using Jetpack Compose
- Real-time, synchronized lyrics (LRCLIB, Genius, YouTube)
- High-fidelity audio engine using Media3/ExoPlayer

EDUCATION

B.E. Computer Science Engineering (Cyber Security)

2024-2028 | CGPA-7.3

Dhanalakshmi Srinivasan College of Engineering and Technology, Mamallapuram

Higher Secondary Education

2021-2023 | Percentage-81.3%

National Matriculation Higher Secondary School
